

Hayden Westbrook

22 Bradford CT Eugene, OR 97404 | (480) 495-7811 | hayden.t.westbrook@gmail.com

Senior software engineer with eleven years of experience specializing in front-end web development but proficient in back-end technologies like Node.js, PostgreSQL, and .NET. Quick learner with a track record of adapting to new technologies. Passionate about creating positive, accessible user experiences and scalable, maintainable software. Seeking a dynamic, collaborative environment where I can have an impact and continue to develop my technical and leadership skills.

SKILLS

Javascript, React, Redux, Typescript, GraphQL, Jest, NextJS, HTML, CSS, Material UI, Dart/Flutter, Node.js, PostgreSQL, .NET, Python, Java, Docker

EXPERIENCE

Lululemon, Remote — *Front End Software Engineer*

AUGUST 2021 – APRIL 2025

- Implement features for a high-traffic eCommerce React/NextJS application serving tens of millions of visitors per month.
- Engineer software that is performant, scalable, testable, and maintainable with best coding and UX practices in mind while adapting to new requirements.
- Ensure responsive design across a wide variety of screen sizes and devices.
- Integrated application with GraphQL endpoint, providing error handling, logging, and client-side caching.
- Managed content models in a Contentful CMS and integrated application with Contentful API.
- Work with UX designers and Figma mockups to implement reusable components that adhere to a standard design system.
- Improve accessibility compliance, focusing on WCAG standards and screen reader usability.
- Spearheaded the migration of a product comparison feature from a monolithic repository
- Provide on-call support, diagnosing and resolving issues using error tracking tools like Sentry and Splunk.
- Collaborate with a cross-functional team to take products through the Agile development methodology, from the design stage all the way to production.
- Participate in architectural discussions, pair programming, and code review.

Advanced Medical Pricing Solutions, Phoenix, AZ — *Full Stack Software Engineer*

JANUARY 2019 – AUGUST 2021

- Led a four-person development team, making key architectural decisions, delegating development tasks, and mentoring junior developers.
- Utilized React, Redux to build an internal application for tracking insurance claims.
- Designed and developed RESTful APIs utilizing Typescript, Node.js, Express, and NestJS.
- Migrated functionality from a monolithic Express app to a NestJS microservices-based architecture.
- Optimized PostgreSQL queries and utilized a Redis cache to improve performance.
- Partnered with product owners to write user stories, prioritize backlogs, and balance new features with technical debt.
- Containerized applications using Docker to automate deployments.
- Managed PostgreSQL tables and wrote queries to power a health care provider locator application complete with a system to score providers based on a number of disparate data sources.

General Motors, Chandler, AZ — *Software Developer*

JUNE 2016 - JANUARY 2019

- Developed functionality for a single-page web application using AngularJS, React, and Spring Boot serving millions of users monthly.
- Transitioned the application from AngularJS to React while ensuring continued functionality and feature updates.
- Designed and implemented a framework for the rapid creation of automated selenium tests.

Northern Arizona University, Flagstaff, AZ — *Student Web Developer*

OCTOBER 2013 – MAY 2016

- Designed and implemented software in a .NET environment for a public-facing university website.
- Created and maintained data models in an Ektron CMS.
- Collaborated with designers, architects, and content teams to understand requirements.
- Explored a variety of technologies to rapidly prototype new functionality, including Python/Flask

EDUCATION

Northern Arizona University, Flagstaff, AZ — *Bachelor of Science in Computer Science*

AUGUST 2012 - MAY 2016
